Prewash cycle increases programme duration approximately 15 min. Consumption values were measured in normalized conditions in compliance with standard IEC/EN 60 456. Consumption data in the home may vary with respect to the values in the table in relation to the water supply pressure and temperature, the load and the type of wash.

The data on the "Energy Label" refer to the programme "Cotton 60°C".

* To reduce the water temperature, some cold water is added at the end of the main wash cycle, before the pump drains the water out.

PREPARATION OF WASH CYCLE

- Load the machine, close the drum doors and check that they are properly locked.
- Add detergents and additives into the dispenser to no more than the "MAX" level mark, as follows:
